

VIRTUALISATION DONE RIGHT

DRIVING YOUR IT COSTS & COMPLEXITY DOWN

Are you looking for ways to reduce your cost and risk while increasing quality and agility of your IT Infrastructure?

Are you interested in reducing IT capital expenditure and facilities costs such as power cooling and real estate?

If so Citrix XenServer™ has the solutions for your business concerns.

Citrix XenServer enables businesses to deploy high-performance Windows and Linux virtual machines rapidly and easily, and to manage them and their related storage and networking resources from a single easy-to-use management console.

Citrix XenServer v4 is a native 64-bit virtualization platform with the scalability required by business-critical applications. The highest host and guest CPU and memory limits available, coupled with fine-grained resource controls for CPU, network and disk, enable it to deliver optimal quality of service.

Citrix XenServer V4 features includes:

- **XenMotion:** Seamlessly move virtual machines between servers without downtime
- **XenResourcePools:** Efficient configuration, allocation and authentication for virtualization resources
- **Xen64:** Scalability and support for enterprise applications
- **XenCenter:** Unified virtualization management interface, including servers, storage and networking
- **XenAPI:** Integration with existing management investments, infrastructure, and processes

The virtualization marketplace is undergoing dramatic transformation that will see server virtualization ubiquitously deployed within the next few years. **See how the Xen™** open source hypervisor and the Citrix XenServer product family are leading the way - and all at a fraction of the cost of the nearest competitor!
